

Introduction to MATCHSAVER AIR ROLLER COVERS

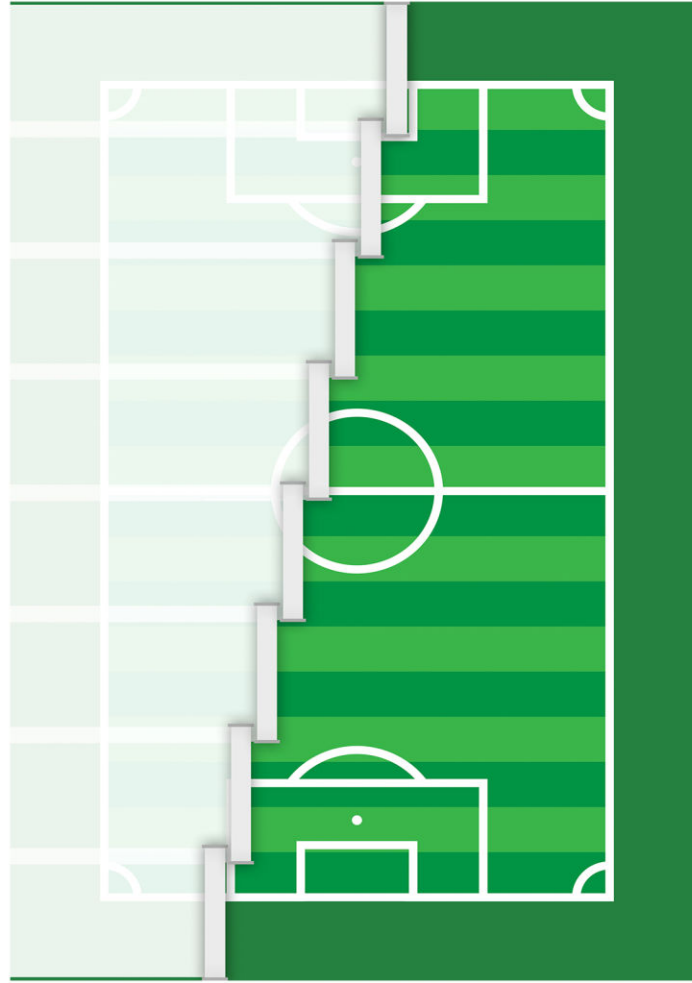

Matchsaver customers include

As well as many more

Standard Configuration (full sized football pitch)

Inflation

Each roller can be inflated in a matter of minutes using the air blowers supplied by Matchsaver.

Delivery

The Air Roller Covers can be delivered fully assembled on pallets ready to deploy.

Deployment

When the roller is inflated, the cover is easily deployed across the pitch.

Matchsaver Air Roller Covers in use at Filadelfia Stadium (Torino FC training Ground).

Torino also use Matchsaver Automated Covers in the Stadio Olimpico

Protecting Synthetic Pitch

Hamilton Academicals Synthetic pitch at New Douglas being protected in sub-zero temperatures.

Snow Protection

Matchsaver air roller covers protecting **synthetic** pitch from harsh weather.

Snow can be removed from Matchsaver Covers, By hand or machine

Snow being removed from Matchsaver Covers at Malmo FF Sweden

Protects natural, synthetic and hybrid pitches from the weather

Matchsaver covers shown at Barrow FC and Malmo protecting from Rain, Frost and Snow

Germination

In addition to protecting the pitch from rain, frost and snow, Matchsaver covers are also widely used to assist with germination throughout the year.

Pitch **after**, showing Matchsaver germination benefits

Can be used with Warm Air Blowers

Warm air being blown under Matchsaver covers to help protect from extreme temperatures

Matchsaver Covers can also be used with Grow Lights

Quick Deployment

Matchsaver Air Roller Covers stored pitch-side, ready for quick deployment.

Compact storage

Matchsaver Air Roller covers for all sized football pitches, take up just 15 sq m of storage space, and can easily be moved between pitches on pallets as shown.

"All the covers definitely stopped the pitch from freezing it was sub-zero for 4 days, and the hard work of the staff and fans helped remove the snow"

William Watson, Head Groundsman, Hamilton Academicals FC

"We wanted to ensure all our home fixtures in January and February could be played, including the FA Cup Match with Rochdale, and with Rigby Taylor and Matchsaver we were able to take immediate delivery of the Air Roller 8. The covers are neatly located pitch side for easy and swift deployment to protect from the freezing temperatures"

Gareth Morgan, Barrow AFC's Head Groundsman

"We are positively surprised with the effect that Matchsaver had on the grass growth in just five days in February winter conditions. We have not used the under-soil heating at all which means financial savings and reduced CO2 emissions. We covered the pitch continuously and did not get any problems with the grass. With Matchsaver we can better control the temperature and humidity of the pitch all year round."

Anders Lindsjö, Stadium Manager, Malmö Swedbank

'It has been a well known fact that The Brewery Field Pitch has been an issue with water logging and frost for a few seasons and with the level of football being played by the club it was imperative that action was taken to ensure as many games as possible be played and not postponed. Matchsaver covers enabled us to meet that demand through immediate delivery and ease of deployment to the playing surface aligned with great after sales support'

Tony Wilson MD Spennymoor Town FC

"Matchsaver is the ideal equipment to protect the new pitch at Stade du Pays de Charleroi. The groundsmen are very pleased with the ease of covering the pitch and the high level of protection the covers provide in winter"

Mehdi Bayat, Owner Royal Charleroi Sporting Club
